

URBAN HABITATS IN SINGAPORE

THE INDISPENSIBLES

Small insects and animals that play a vital role in the ecosystem. They are often overlooked but are essential for the health of our parks and gardens.

URBAN HABITATS

Urban habitats are the places where we live and work. They provide a home for many species of plants and animals. We can create more urban habitats by planting native plants and trees.

WHAT ARE PARK CONNECTORS?

Park connectors are linear green spaces that link parks and gardens. They provide a safe and healthy environment for people to walk and jog. They also provide a habitat for many species of plants and animals.

FINDING URBAN NATURE

An introduction to the many 'hidden' urban habitats in Singapore. We can find many species of plants and animals in our parks and gardens. We can also find many species of plants and animals in our homes and workplaces.

GREENING SINGAPORE

Greening Singapore is a national initiative to increase the amount of greenery in Singapore. We can do this by planting more trees and plants. We can also do this by creating more urban habitats.

FRAGRANT

Many plants and flowers have a pleasant smell. This is because they release a substance called fragrance. This substance attracts many species of insects and animals. We can enjoy the fragrance of many plants and flowers in our parks and gardens.

ANIMALS OF THE URBAN HABITAT

PLANTS IN OUR CITY

Many plants and flowers are found in our parks and gardens. Some of these plants are native to Singapore, while others are introduced. We can identify many of these plants by their leaves, flowers, and fruits.
